

S7090PVR

Satellite Receiver with HDD

High Definition
True HD Satellite Receiver
with HDMI 1080P

The Freeview approved High Definition DishTV S7090PVR digital satellite HDD receiver provides high definition 1080p output via HDMI and full MHEG-5 Freeview EPG. The HD satellite receiver will decode both SD and HD satellite broadcasts.

With the MyFreeview S7090PVR you can record two channels while watching a third or a recorded program. Booking is done direct from the 8 day EPG and includes full series linking to record a series all season long. Supports USB HDD expansion and will play audio, video and image files on your TV.

Special Features of the DishTV S7090PVR

~ 1080P High Definition Upscaling

With a true HD chipset the S7090PVR offers high quality HD upscaling to 1080P to best suit your HDTV or projector.

~ Full HD Satellite Receiver

Although Freeview's current satellite service is in SD, the S7090PVR is also a full HD receiver which will decode other HD broadcasts via satellite - all services can be recorded.

~ CI Slot for Smart Card Reader

Why have two receivers in your lounge, one for Freeview and one for your PayTV? The CI slot in the S7090PVR allows you to fit your CAM (card reader) and smart card and watch and record both Freeview and your other channels.

Sky uses a special encryption for which a CAM is not usually available.

*The Weather and Map services are provided by secondary providers and are not under the control of DishTV. DishTV can not guarantee the ongoing use of these free services.
